

## program 7 : Linked List $\rightarrow$ deletion

a) Deletion of first element

b) Deletion at specified position

c) Deletion at end

pseudo code: void deleteFirst() {

    if (head == NULL) { printf("Empty list"); }

    temp = head;

    head = head  $\rightarrow$  next; }

void deleteLast() {

    if (head == NULL) { printf("Empty list"); }

    if (head  $\rightarrow$  next == NULL) { head = NULL; }

    temp = head;

    while (temp  $\rightarrow$  next != NULL) { prev = temp; temp = temp  $\rightarrow$  next; }

    prev  $\rightarrow$  next = NULL; }

void deleteSpecific (int value) {

    if (head == NULL) { printf("Empty list"); }

    if (head  $\rightarrow$  data == value) { head = head  $\rightarrow$  next; }

    while (temp  $\rightarrow$  next != NULL && temp  $\rightarrow$  data != value)

        { prev = temp; temp = temp  $\rightarrow$  next; }

    if (temp == NULL) { printf("Not found"); }

    prev  $\rightarrow$  next = temp  $\rightarrow$  next; }

```

```
    if (head == NULL) {
```

```
        printf("List is empty\n");
```

```
        return;
```

```
}
```

```
    struct Node *temp = head, *prev = NULL;
```

```
    if (head->next == NULL) {
```

```
        printf("Deleted element: %d\n", head->data);
```

```
        free(head);
```

```
        head = NULL;
```

```
        return;
```

```
}
```

```
while (temp->next != NULL) {
```

```
    prev = temp;
```

```
    temp = temp->next;
```

```
}
```

```
printf("Deleted element: %d\n", temp->data);
```

```
prev->next = NULL;
```

```
free(temp);
```

```
}
```

```
void deleteAtPosition(int data) {
```

```
    if (head == NULL) {
```

```
        printf("List is empty.");
```

```
        return; }
```

```
}
```

```
struct Node *temp = head, *prev = NULL;
```

```
if (head->data == data) {
```

```
    printf("Deleted element: %d\n", head->data);
```

```
    head = head->next; }
```

```
free(temp);
```

```
return;
```

```
}
```

```
